Ms. Marlene H. Dortch, Secretary
Federal Communications Commission
445 12th Street SW
Washington, DC 20554

Re: IB- Docket No. 11-109

Dear Ms. Dortch,

I write you today in strong support of LightSquared's new 4G broadband network. As an engineer I can't but help figure out how things work. I also look at things and see if the design can be approved upon. My conclusion is that LightSquared has a solid design with transparent simulated field conditions. Their opposition does not.

That's why I will be watching closely to see if the FCC will observe science, fact and reason or go the way things have in recent years and let spin and politics win out.

I think your office is more geared towards reason and solutions than what the politicians do to each other. But even if politics has seeped its way into your office, I'm hopeful the facts will give you the support for a yes decision for LightSquared.

Here are a few facts about LightSquared's Plan:

1. Creates new jobs
2. Put money into economy
3. Improves rural phone coverage
4. Help small businesses
5. Gives America a competitive edge over China and India

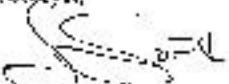

Here are a few facts about the GPS Companies:

1. Almost all devices will not be affected
2. There are tests that will likely end or inspire a solution to the small percentage of interference

Again, as an engineer the decision looks cut and dry with an easy 5-2 advantage for LightSquared. The GPS industry doesn't have much of a case to make really. Even under the worst case scenario only a fraction of their products might need a work around or patch application that will likely be provided to them for free from LightSquared. So you should point this out and propose my idea if you need to.

And if the FCC will be fair, and let the American way prevail I bet both sides will make millions off each other. So I hope you help them see this and threaten a 'time out' to either side if they can't learn to work together.

Sincerely,

Mr. John Scott
